Project Title: Integrated hospital management system with patient records, doctor scheduling and billing

Module Photographs:

Project Description: Billing Management

The Billing Management module is designed to manage and simplify the billing process in a hospital. It generates accurate bills based on consultation fees, diagnostic tests, medicines, treatments, room charges, and other hospital services. The module maintains patient billing records, calculates the total amount, records payments, and helps staff track pending and completed payments. By integrating billing with patient records and doctor scheduling, the system reduces manual errors, improves transparency, and provides an efficient and organized hospital billing process.

Contribution:

Developed the Billing Management module to automate bill generation, payment tracking, and patient billing records.

Integrated billing with patient and doctor service details to ensure accurate, efficient, and transparent hospital billing.
